

Noetica — Beta Tester Outreach Copy (v2)

Grounded in the actual manifesto and the live "Noetica Intelligence — Subscribe" form. What's being tested: a **personalized scientific intelligence briefing** — daily/weekly/monthly, ranked by significance (not popularity), built from preferences set on the form (expertise level, time budget, frequency, fields, discovery types, exploration allocation).

Replace [FORM LINK] everywhere with your actual link before posting.

LinkedIn Post

I've been building Noetica — an open-source attempt at a different kind of research feed.

Most systems rank by engagement: what's trending, what's popular, what gets clicks. Noetica ranks by scientific significance instead — novelty, strength of evidence, cross-domain influence, historical importance. Every morning it scans new papers, patents, grants, and repositories, and builds a personalized briefing around three things you tell it: how much time you actually have, your level of expertise, and which fields you care about.

One detail worth mentioning: 20% of what you receive is deliberately outside your stated interests — a small allocation so your feed doesn't turn into an echo chamber.

This week I'm opening it to a small group of beta testers. The setup form takes about 3 minutes, and your answers directly decide what you receive: 👉 [FORM LINK]

Genuinely looking for feedback — what's missing, what's off, what's actually useful. Comments or DMs are open.

(Optional: #OpenSource #ScientificIntelligence)

Instagram — Feed Caption

Testing something I've been building: Noetica.

Instead of ranking research by what's trending, it ranks by scientific significance — how strong the evidence is, how novel it is, how much it connects across fields. Every morning it scans new papers, patents, and grants, and sends a briefing built around how much time you have and what you actually care about.

It even keeps 20% of what you get outside your usual interests, on purpose — so your feed doesn't turn into an echo chamber.

Beta's open this week. Form takes ~3 minutes — link in bio, or comment "BETA" and I'll send it over.

WhatsApp — Group / Chat Message

Hey! Quick one — I've been building something called Noetica, an open-source project that ranks scientific discoveries by significance (evidence, novelty, cross-field impact) instead of by what's trending. It scans new papers, patents, and grants every morning and sends a briefing built around your time, expertise, and interests.

Opening a small beta this week. Setup form takes about 3 minutes: [FORM LINK]

Would really value your honest feedback once you get your first briefing 🙏

Notes

- "Personalized email" became "personalized intelligence briefing" throughout — matches the language your own form already uses, and is more specific/credible than a generic newsletter framing.
- The 20% exploration detail is called out deliberately in every version — it's the one feature that's both unusual and easy to understand in one line, which makes it good evidence of substance rather than a marketing claim.
- The form's own consent question already covers data-use transparency, so no extra privacy line is needed in the posts.
- On scarcity: still worth avoiding "only X spots left" — if you want to cap testers, state the real number honestly.

- The structured feedback form from earlier still applies as-is; nothing here changes how you'd collect responses.
